

Complete Control at Every Door

AccessNsite® is a Wireless/IP-enabled system that integrates seamlessly with new and existing systems for a simple and cost-effective solution with efficient maintenance. Our all-in-one security suite combines essential door opening needs, innovative access, and monitoring solutions to maintain total control and peace of mind.

Open Architecture

With a modular, open-architecture design, AccessNsite® provides the flexibility and scalability you need to efficiently adopt new technology and to reliably address your ever-evolving security needs. The cross-platform, database-independent software runs on Windows and Linux, as well as a variety of databases, including Microsoft SQL Server, MySQL, and MariaDB.

Smart Simplicity

AccessNsite® combines all related security functions and data into one comprehensive, customizable user interface. The browser-based, mobile-ready platform allows you to securely access and manage your facilities anytime, anywhere.

- Cohesive hardware configuration for traditional and edge devices
- Drillable engine to efficiently investigate events and alarms
- System monitoring tools and event streaming
- Customizable graphic maps
- Real-time automated and filter-based custom reporting
- Scheduling of data imports
- Straightforward personnel and identity management

Intelligent Integration

AccessNsite® is a Wireless/IP-enabled system that integrates seamlessly with best-of-breed hardware and existing systems for simple, scalable, and cost-effective deployment and maintenance

- Preconfiguration with Rapid Deployment Server (RDS-2) for fast, reliable deployment
- Integrate with existing systems — ERP, HR, visitor systems, MS Active Directory
- Intelligent and IP-based lockset integration — WiFi and Live (wired, PoE, BLE)
- Video, intrusion, and biometrics integrations

Contact us to schedule a software demonstration.

Advanced Hardware Integrations

AccessNsite® is a wireless/IP-enabled system designed to fully integrate with best-of-breed access control hardware and systems, including Mercury panels and intelligent locksets — Live (wired, PoE, BLE) and WiFi — from Allegion, ASSA ABLOY, and BEST.

Rapid Deployment Server

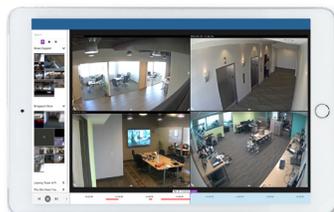

Our Rapid Deployment Server (RDS-2) is a powerful and compact all-in-one server providing the full enterprise-level AccessNsite® access control solution. Designed with cross-platform flexibility that integrates with your existing infrastructure, RDS-2 works seamlessly straight out of the box, saving you significant time, money, and hassle.

- Secure, network-friendly platform that leverages your existing systems
- Supports connectivity from any browser-based device
- Application software, database, and administrative utilities are all pre-installed
- Designed to run with little or no technical support.

VideoIP VMS

VideoIP offers a cross-platform, mobile-ready video management solution that adapts to your existing infrastructure to reduce IT, hardware, and licensing costs — whether you need an entry-level system or a global enterprise solution.

- Supports thousands of IP cameras through industry-standard ONVIF specifications
- Access live and recorded video for multiple locations, locally and remotely
- Fast and easy surveillance administration with recording through scalable NAS storage
